CURRENT INDUSTRIAL REPORTS

U.S. Department of Commerce BUREAU OF THE CENSUS

3,150,110,110,110

OCTOBER 1978

M3-1(78)-10 For Release 2:30 P.M., Monday, December 4, 1978

(All figures in text below are in seasonally edjusted current dollars.)

New orders for manufactured products rose \$5.6 billion 4.2 percent to \$137.4 billion in October, the Department of Commerce, Bureau of the Census reported today. Durable goods new orders showed a sharp increase of \$4.7 billion or 6.4 percent to \$77.3 billion, with transportation equipment accounting for almost one-half of the increase. All other major durable goods industry groups also showed increases, with the largest gains reported by primary metals, up \$0.6 billion or 5.2 percent to \$11.8 billion; fabricated metal products, up \$0.4 billion or 5.0 percent to \$8.6 billion; and nonelectrical machinery, up \$0.4 billion or 2.8 percent to \$13.1 billion.

The nondefense capital goods industries showed a \$2.1 billion or 10.4 percent new order increase from September to \$22.2 billion, with the aircraft and parts industries accounting for more than three-quarters of that increase. The household durable goods industries, as a group, had a decline in new orders of \$0.1 billion or 3.1 percent to \$4.3 billion. A \$0.6 billion decline in the radio and TV industry was only partially offset by gains in the other household durable categories.

Unfilled orders for manufactured products for October increased \$7.0 billion or 3.1 percent to \$230.9 billion. The sharp increase in new orders boosted the durable goods backlog \$7.1 billion or 3.3 percent to \$220.7 billion. This is the largest month-to-month backlog increase since a 3.6 percent rise reported in March 1973. All major categories contributed to the backlog increase, the largest being transportation equipment (especially aircraft and shipbuilding), up \$4.3 billion or 5.9 percent to \$78.1 billion; primary metals (ferrous and nonferrous each accounting for about one-half), up \$1.0 billion or 3.9 percent to \$25.7 billion; and machinery, up \$1.0 billion or 1.3 percent to \$80.9 billion.

Shipments of manufactured products in October increased \$2.5 billion or 2.0 percent to \$130.4 billion. This increase was representative of both the durable and nondruable goods industries. Of the \$1.3 billion increase in durable goods, the primary metals industries accounted \$0.6 billion or 6.0 percent

\$10.9 billion, and nonelectrical machinery \$0.3 billion or 2.8 percent to \$12.4 billion. A decline in shipments of transportation equipment was caused by a drop in the aircraft and parts industries of \$0.8 billion or 18.9 percent to \$3.3 billion. This decline followed a 15 percent increase for the industry in September. The aircraft shipment decrease was reflected in the capital goods industries, which dropped \$0.5 billion or 2.3 percent to \$20.8 billion, with decreases in both the defense and nondefense categories.

Of the \$1.2 billion shipment increase in nondurable goods, food and kindred products accounted for about one-half, up \$0.7 billion or 3.8 percent to \$18.5 billion. The only significant decline occurred in petroleum and coal products, down \$0.2 billion or 2.4 percent to \$8.8 billion.

Inventories for the manufacturing industries rose \$1.0 billion or 0.5 percent to \$195.0 billion for October. In the transportation equipment industries, a large decline of \$0.7 billion or 8.3 percent in motor vehicles and parts to \$7.8 billion was offset by increases in the aircraft and shipbuilding industries of \$0.4 billion and \$0.2 billion, respectively. Nondurable goods industries reported a slight increase in inventories of 0.1 percent or \$0.1 billion to \$68.0 billion.

The inventory increase of 0.5 percent in October is the smallest month-to-month percentage increase reported this year. The average monthly increase for the first 10 months of the year has been 0.9 percent. The sharp increase in unfilled orders for October brings the average monthly increase in backlog this year to 1.9 percent.

The figures on the durable goods industries in this report supersede those issued earlier in the advance report on durable goods. The present report is based on more complete reporting, but the estimates are also considered preliminary. Final figures will appear as historical data in the report to be published for next month. The advance report on durable goods fo November is scheduled for release on December 21, 1978 and the full report is scheduled for release on January 3, 1979.

Address inquiries concerning these figures to U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call Ruth Runyan or Kathleen Swindell, (301) 763-2502.

For sale by the Subscriber Services Section (Publications), Bureau of the Census, Washington, D.C. 20233, or any U.S. Department of Commerce district office. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. Price 30 cents per copy, \$3.60 per year.

'Shipments and new orders are the totals for the period and are adjusted for trading-day and ealendar-month variations; unfilled orders and inventories are as of the end of the period and are not adjusted for

trading-day or ealendar-month variations. $^{2}{\mbox{The supplementary series}}$ are regroupings of the separate industry eategories as follows:

iligusehold durable goods industries - Household furniture; kitchen articles and pottery; eutlery, handtools, and hardware; household appliances; radio and TV; ophthalmic goods, watches, and clocks; and miscellancous

personal goods.
Capital goods industries series is comparable to the previous Producors' Capital goods and the Defense Products (old series) eategories.
Capital goods industries—The capital goods industries series is compounded for machinery and equipment and machine shops), electrical machinery (excluding household appliances, radio and TV and electronic compounded nondefense portions of shipbuilding and replaining and ralized equipment, ourselvent and alreraft parts, and ordnance.
Defense products—Dased on separate reports on defense work filed by large defense contractors in the following industries: Ordnance, communication equipment, alreraft parts, and shipbuilding. The data are comparable to those published annually in the MA-175, Shipments of Defense—Oriented Industries, for the specified industries.

Ppreliminary. TRevised.

Shipments and new orders are the totals for the period and are adjusted for trading-day and calendar-month variations; unfilled orders and inventories are as of the end of the period and are not adjusted for trading-day or calendar-month variations.

The supplementary series are regroupings of the separate industry categories as follows:

Household durable goods industries - Household furniture; kitchen articles and pottery; cutlery, handtools, and hardware; household durable goods industries - Household furniture; kitchen articles and pottery; cutlery, handtools, and hardware; household durable goods industries - Household furniture; kitchen articles and pottery; cutlery, handtools, and hardware; personal goods.

Capital goods industries - The capital goods industries is comparable to the previous Producers' Capital Goods and the Defense Products (old series) categories.

Nondefense products--Machinery, except electrical (excluding farm machinery and equipment and machine shops), electrical machinery (excluding household appliances, radio and TV and electronic components), and the nondefense portions of shipbuilding and repairing and railroad equipment, communication are reports on defense work filed by large defense contractors in the following industries, ordnance, communication equipment, aircraft parts, and shipbuilding. The data are comparable to those published annually in the MA-175, Shipments of Defense-Oriented Industries, for the specified industries.

Preliminary. Revised.

Shipments and new orders are the totals for the period and are adjusted for trading-day and calendar-month variations; unfilled orders and inventories are of the end of the period and are not adjusted for trading-day or calendar-month variations.

The supplementary series are regroupings of the separate industry categories as follows:

Household durable goods industries - Household furniture; kitchen articles and pottery; cutlery, handtools, and hardware; household appliances; radio and TV; ophthalmic goods, watches, and clocks; and miscellaneous

Capital goods industries - The capital goods industries series is comparable to the previous Producers' Capital Goods and the Defense Products (old series) categories.

Nondefense products - Machinery, except electrical (excluding farm machinery and equipment, and machinery nature and animate and series products of shipbuilding and railroad equipment, communication equipment, aircraft and aircraft parts and ordnance.

Defense products - Based on separate repetrs of effense work filed by large defense contractors in the following industries: Ordnance, communication equipment, aircraft and aircraft parts, and shipbuilding.

data are comparable to those published annually in the MA-175, Shipments of Defense-Oriented Industries, for the specified industries.

Peginning in 1976, the fiscal year for the Federal Government probably affected the awarding of contracts and other financial arrangements. Although the impact of this change is not known, the use of previously established seasonal factors would have substantially distorted the current data since these seasonal factors reflect historical Government purchasing patterns. Therefore, beginning in July 1977, new composite seasonal factors were developed by combing the existing end of fiscal year information with data for the previous calendar quarter (i.e., one quarter preceding the end of the fiscal year information with data for the previous calendar quarter (i.e., one quarter preceding the end of the Separately tabulated defense industries. This adjustment also modified the new orders data. Similar adjustments could not be made for nondefense Government orders seasonal tater or compiled separately. This method of calculating the seasonal factors will be used until a sufficient amount of data are available to assess the impact of the change in the fiscal year on the seasonal pattern of the defense industries.

Ashipments and new orders are the totals for the period and are adjusted for trading-day and calendar-month variations; unfilled orders and inventories are as of the end of the period and are not adjusted for trading-day or calendar-month variations.
The supplementary series are regroupings of the separate industry categories as follows:

Household durable goods industries - Household furniture; kitchen articles and pottery; cutlery, handtools, and hardware; household appliances; radio and TV; ophthalmic goods, watches, and clocks; and miscellaneous

personal goods.

Valetial goods industries series is comparable to the previous Producers' Capital Goods and the Defense Products (old series) categories.

Nondrial goods industries - The capital goods industries are mechinery and equipment and machiners shops), electrical machinery (excluding household appliances, radio and TV and electronic components), and the nondefense portions of shipbuilding and repairing and railroad equipment, communication equipment, aircraft and aircraft parts, and ordnance, communication and repairing and shipbuilding. The Defense products—— Based on separate reports on defense work filed by large defense contractors in the following industries; for the specified industries.

¹Excludes the following industries with no unfilled orders: Wood and lumber products; glass containers; metal cans, barrels and drums; farm machinery and equipment; motor vehicle assembly operation; other transportation equipment; foods and related products; tobacco; apparel and related products; building paper; die-cut paper and board; chemicals; petroleum and coal products; and rubber and plastics products, n.e.c.

The following is a description of the survey and definitions used. These are provided to clarify the meaning of the items involved and do not represent any revisions from those definitions previously employed.

DESCRIPTION OF SURVEY

The Manufacturers' Shipments, Inventories, and Orders Survey (M3-1) provides monthly figures that are comparable to the annual totals published each year in the Annual Survey of Manufactures (ASM). The ASM is a probability sample of approximately 70,000 manufacturing establishments drawn from the most recent 5-year census universe of about 312,000 establishments. In the ASM, each manufacturing establishment provides data on employment, payrolls, shipments, cost of materials, capital expenditures, and inventories as well as other selected items. Until 1976, the ASM did not compile information on unfilled orders or new orders. Since the ASM is establishment based, it provides data for each of the 425 manufacturing industries in the Standard Industrial Classification (SIC) system and area data for industry groups.

The estimates presented in the M3 report are based on a sample panel of approximately 5,000 reporting units, consisting of virtually all manufacturing companies with 1,000 or more employees and additional medium-sized companies that strengthen the sample coverage in individual industry cells. The reporting unit for many medium- or single-line companies comprises all operations of the company. Many of the larger diversified companies file separate divisional reports for their operations in different industries, although this divisional reporting is not followed by all large companies.

Each reporting unit in the monthly panel is classified into one of 79 industry classifications for tabulation. Many of the reporting units included mixed industry activity even within the broad industry categories of the monthly survey. However, the survey estimating procedure assumes that the month-to-month changes of the reporting units classified in each industry category effectively represent the month-to-month movements of the establishments in the SIC industries which make up the category. This ratio estimating procedure is used for all items compiled in the survey except for new orders which is discussed separately below.

The M3 series is periodically benchmarked to the ASM for shipments and inventories. The most recent benchmark was for 1974 through 1976 and issued in the report M3-1.7 released in March 1978. In the absence of benchmark data for unfilled orders, levels were set in August 1962 based upon the ratio of unfilled orders to sales for companies reporting in the M3. These levels were reset as of December 1973 in the M3-1.6 benchmark publication released in December 1976.

The M3 data are subject to some limitations primarily resulting from the relatively small sample used to develop the estimates and the use of divisional and company reports to extrapolate establishment based data. Precise measurement of these limitations based on estimates of the sampling errors is not available. In addition to the general limitations of M3 survey data, the estimated levels of unfilled orders are subject to further limitations due to the assumptions made in developing these levels, the definition of unfilled orders, and response difficulties. These limitations are discussed in greater detail on

pages i-iv in the introductory chapter of the latest benchmark publication mentioned above. Generally, the limitations to the unfilled orders data primarily apply to the absolute level of unfilled orders and, to a much lesser extent, to the month-to-month change in unfilled orders. Since this month-to-month change in unfilled orders is used to develop the monthly estimates of new orders, the estimates of new orders are subject to fewer limitations than the unfilled orders estimates.

To remedy the deficiencies of the presently published levels of unfilled orders, an independent benchmark survey of unfilled orders was initiated in 1977. Results from this survey should be available in the latter part of 1978.

EXPLANATION OF TERMS

Value of Shipments—Shipments in the monthly survey are equivalent to value of shipments as reported in the ASM which are received or receivable net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Included in shipments are the value of all products sold, transferred to other plants of the same company, or shipped on consignment.

Shipments also include receipts of establishments in the industry for contract work performed for other, resales, receipts for miscellaneous activities such as the sale of scrap and refuse; value of installation and repair work performed by employees of the plant; and value of research and development performed at the plant. In the ship building industry the value of work done in a given year varies considerably from the value of shipments because of the long lead time between the input of the materials and labor and the shipments of the completed ship. In the annual survey, therefore, the value of work done during the year is requested rather than the value of shipments. Value of work done is also reported by aircraft and missile producers working on cost-plus contracts.

The value of shipments figures developed from the ASM contain duplication at the all manufacturing and industry group levels since the products of some industries are used as materials by other industries within the industry group. With the exception of motor vehicles, it is not significant at the 4-digit SIC group level. Since the M3-1 industry categories typically are groupings of industries, this duplication is significant for all the manufacturing, durable goods and nondurable goods categories and the various market groups. The significance of the duplication within the specific M3-1 industry groups varies depending on the 4-digit industry composition of these groups. It is most pronounced in a few highly integrated industry areas such as primary metals and motor vehicles and parts.

Since most monthly reports are for the entire company or major divisions rather than establishments, the companies are requested to report net sales, i.e., total company billings after discounts and allowances. Companies which file divisional reports are requested to treat transfers from the division of the company to another as if they were net sales to outside customers. Although this definition of shipments in the monthly reports differs from that used in the annual establishment reports, it is assumed that the month-to-month changes in company sales in the industry are representative of the month-to-month shipments of the establishments in the industry.

Inventories—End-of-month inventories in the monthly survey are identical in definition to the end-of-year inventories in the ASM. In the ASM, respondents are asked to report inventories of individual establishments at approximate current cost if feasible; otherwise, "at book values." Since different methods of inventory valuation are used (LIFO, FIFO, etc.), the definition of the aggregate inventories for establishments in an industry is not precise. The figures on the change in inventories from one period to the next are of greater significance than the actual aggregates.

Inventories are reported by stage of fabrication: (a) finished goods; (b) work in process; and (c) materials, supplies, fuel, and other inventories. In using inventories by stage of fabrication at the all manufacturing and 2-digit industry levels as well as for the durable and nondurable goods sectors, it should be noted that a finished product of one industry may be a raw material for another industry at the next stage of fabrication. Insofar as the durable and nondurable goods sectors and also the 2-digit industry groups contain industries with successive stages of processing, the same type of commodity may be included under different inventory categories in the aggregate statistics.

New Orders and Unfilled Orders—The unfilled orders shown in this publication represent the net sales value of goods on order which have not been shipped. They are net of cancellations and include all adjustments resulting from contract

change documents. Only those orders supported by binding legal documents such as signed contracts or letter contracts are included. Some large defense contracts are authorized and funded in several stages. Only the funded portion of such contracts are included in these figures.

New orders are not calculated according to the standard ratio estimate procedure, even though they are collected as a separate item. The reason for this is that not all companies report new orders, and some that do limit their reporting to specific products for which long lead times are required in the production cycle. These companies, in effect, exclude new orders received for products that are shipped from inventory. To take advantage of the higher response rate for shipments data and to include orders filled from inventory, new orders are computed by adding the change in the backlog of unfilled orders to the current month's shipments. Thus, the estimate of new orders includes orders that are received and filled in the same month as well as orders that have not yet been filled. The estimate also includes the effects of cancellations and modifications of previously existing contracts.

Seasonally adjusted new orders are similarly derived from the monthly change in the seasonally adjusted backlog of unfilled orders and seasonally adjusted shipments. Many nondurable goods industries and some durable goods industries have no backlog of unfilled orders. Shipments are used as the estimate of new orders in these industries.
